

# Andrew S. Voyles, Ph.D., EIT

andrew.voyles@berkeley.edu ◊ (510) 486-7310 ◊ <https://avoyles.github.io>  
Nuclear Science Division ◊ Lawrence Berkeley National Laboratory  
Building 088-163D — M/S 88R0192 ◊ Berkeley, CA 94720 USA

---

## EDUCATION

### University of California, Berkeley

Ph.D., Nuclear Engineering  
Nuclear Regulatory Commission Graduate Fellowship

Berkeley, California  
**August, 2018**

### University of Utah, Honors College

B.S., *cum laude*, Chemical Engineering  
Minors: Nuclear Engineering, Chemistry  
University of Utah President's Club Scholarship, Dean's List, 2009 - 2013

Salt Lake City, Utah  
**May, 2013**

## RESEARCH EXPERIENCE

### University of California, Berkeley

*Assistant Research Engineer*

Berkeley, California  
**June, 2019 – Present**

- Led fundamental studies of low-energy nuclear physics at the LBNL 88-Inch Cyclotron as a part of the LBNL/UCB Nuclear Data Program, and supervised M.S./Ph.D. students in these efforts.
- Efforts include the measurement of charged-particle and neutron-induced reaction cross sections relevant to the production of radionuclides for medical applications, and the measurement of independent and cumulative fission yields using cyclical neutron activation analysis,
- As Isotope Production Group leader, responsible for developing the technical vision for these research objectives, and facilitating interactions with other research organizations to promote collaboration and enhance the impact of research results, chiefly with LANL and BNL.
- Compiled all nuclear data produced in experiments into the reaction database EXFOR.

*Postdoctoral Scholar*

**August, 2018 – June, 2019**

- Responsible for overseeing the effort to determine novel production routes for  $^{225}\text{Ac}$ ,  $^{212}\text{Pb}$ ,  $^{68}\text{Ge}$ , and  $^{236}\text{Np}$ , through experiments at the LBNL 88-Inch Cyclotron as a part of the LBNL/UCB Nuclear Data Program.
- Developed in-house capabilities for electrodeposition and pressed-powder target fabrication.
- Assisted other members of the group by supervising M.S./Ph.D. student efforts to determine isotope production routes through cross section measurements at LBNL, LANL, and BNL.

*Graduate Student Researcher / NRC Fellow*

**August, 2014 – August, 2018**

- Researched “Nuclear Excitation Functions for Production of Novel Medical Radionuclides” — measurement of cross-sections for neutron-induced and charged particle-induced reaction pathways for the production of emerging novel therapeutic and diagnostic medical radionuclides, with high specific activity.
- Developed intense mono-energetic neutron source capabilities for production of novel therapeutic radionuclides.
- Research carried out at the Lawrence Berkeley National Laboratory's 88-Inch Cyclotron and the Los Alamos National Laboratory's Isotope Production Facility at LANSCE.

### University of Oslo

*Visiting Researcher, Department of Physics*

Oslo, Norway  
**February – May, 2018**

- Studied preparation of a chelate-conjugated biomolecule carrying a radionuclide, in the Nuclear and Energy Physics group.
- Focus on the radiolanthanide  $^{161}\text{Tb}$  and a peptidomimetic displaying dual-receptor targeting through the endothelial growth factor receptor and the HER2/neu antigen.

### Institute for Laser Engineering, Osaka University

*Visiting Researcher*

Osaka, Japan  
**February – March, 2015**

- Research and evaluation of solid debris collection diagnostics in search of evidence of nuclear-plasma interactions.

### University of Utah

*Undergraduate Researcher, Nuclear Engineering*

Salt Lake City, Utah  
**August, 2010 – August, 2011**

- Developed simulation of Neutron Activation Analysis, an analytical technique using neutron irradiation of matter to determine highly precise compositions of samples.

*Undergraduate Researcher, Chemistry*

**August, 2009 – May, 2010**

- Synthesis and characterization of metal-doped Cadmium-Selenium quantum dots used to produce photonic crystals structured after iridescent scales of several Brazilian beetles.
- Applications include fully-optical circuitry and tunable, customizable photoluminescent sensors for desired molecules and/or cells.

**University of West Florida**

Pensacola, Florida

*Visiting Researcher, Department of Physics*

**May, 2008 – January, 2009**

- Modeled specific heat capacity anomalies of 4'-octyl-4-biphenyl-carbonitrile liquid crystals, due to the effect of mesophase transitions.

## TEACHING EXPERIENCE

**University of California, Berkeley**

Berkeley, California

*Graduate Student Instructor*

- NE 101 / 210M — Nuclear Reactions and Radiation

**Fall 2015**

**University of Utah**

Salt Lake City, Utah

*National Science Foundation Outreach Mentor*

**May, 2010 – May, 2013**

- Created and presented hands-on demos to local schools, to advocate engineering and science careers, focusing on historically underrepresented demographics.

*Teaching Assistant*

- CH EN 2300 — Thermodynamics I

**Spring 2013**

- NUCL 3000 / 5030 — Nuclear Principles in Engineering

**Fall 2011**
